

LIGHTNET®

GET THE BIG PICTURE! - Birket Engineering's LightNet is a one-of-kind, **large-area** image field providing a continually changing, illuminated display for simple graphics.

Designed for rugged outdoor use on a mountain-side or architecture of any size, or indoor use as a theater backdrop, LightNet gives you individual control of thousands of low-power, high-intensity LEDs. A fraction of the cost of video quality displays, LightNet is the low-cost, low-resolution alternative to expensive high-res systems. Modular design creates a light array at any LED density to convey your message over any non-uniform surface. Simple PC-based interface brings your image to life, bigger than life.

"...SHOW IS GREAT, WE'VE HEARD NOTHING BUT POSITIVE STUFF. THERE'S A BUZZ IN THE COMMUNITY ABOUT IT. IT'S EXCITING!!"

Clay Davis, Pastor
Skyline Wesleyan Church, San Diego, CA.
December 2, 2005

The pictures at the right show an outdoor LightNet installation. This Fall 2005 San Diego project calls for a LightNet to cover a 56' high X 64' wide hillside behind an outdoor live show. The array of 3,584 high-intensity LEDs form the production's dynamic backdrop. LEDs are positioned every 12" in grid fashion.

Clay Davis, Pastor of Skyline Wesleyan Church in San Diego, CA wrote to us on opening night saying: '...show is great, we've heard nothing but positive stuff. There's a buzz in the community about it. It's exciting!!'

Birket Engineering, Inc. has been thrilling the world's audiences with custom electrical & software systems since 1984. Located in beautiful central Florida, the company's work may be found in every Walt Disney Company and Universal Studios theme park, in Las Vegas, on Broadway, and at the finest entertainment destinations around the globe. See www.birket.com.
